

Accessory pocket

APPLICATIONS

- The Inforest Accessory Pocket was designed to transport and protect items such as small drip torches, flares, water bottles, etc. during work days in forest fires. It can be attached to our backpacks such as the Day Pack or to the belt of the user's clothing.

MATERIALS

- It is made of 420 D x 420 D polyamide, a material of high mechanical resistance with a smooth dust-and-dirt-resistant surface and low weight per square meter.

Inner structure made of foam, which ensures the protection of the content.

DESING

- It consists of a cylindrical container and a lid, whose Velcro closure system guarantees quick and easy access to the elements. It features a Molle system on its sides: a modular system of nylon straps sewn in that allow attachment of different tactical accessories to be carried. The metal grommet on the base provides drainage of the contents in case of spill.

FUNCTIONALITY

- It allows the user to transport elements to the fire line safely and perform extinguishing tasks.
