

Ave brush hook

USES

- | Inforest's exclusive design. The brush hook is a multi-purpose tool which combines in a hardened steel blade the features of a curved machete, billhook and a straight axe, since it distributes the sharp edges in the front curved arrises and the back straight arris, in addition to the top part which is mainly used for pushing and raising branches.
- | It is a multi-functional tool recommended for jobs that require agility and rapid advance.
- | The Bird Brush Hook lies in between an Axe and a Machete providing greater versatility when working in the line. It serves as a support tool for the chainsaw operator.
- | Its main purpose is to remove vegetation, cut shrubs and thin branches, and create firebreaks in medium and low-height vegetation.

DESIGN AND MATERIALS

- | The blade has internal cuts, which reduce the total weight of the tool, and a wooden handle with optimal grip.

Weight	2.2 kg	Handle	Wood
Length	1.15 m
