

Small first aid backpack

QR: Use your camera or bar code scanner and download the digital PDF version

Backpack designed for transporting essential items for patient assistance.

USES:

- Safe transport of items for primary care in remote areas or locations with difficult access.
- Self-protection for response teams, as it can hold items for airway management, hemorrhage control, and trauma care.

DESIGN AND MATERIALS

- Protection of interior contents through impact absorption.
- Thermal insulation.
- Internal compartments designed for quick identification of items.
- Capable of transporting necessary supplies for airway management, circulation, immobilization, biosafety, medication, and more.
