

Small first aid backpack

USES

- Thanks to its reduced dimensions and excellent internal distribution, this backpack has a great capacity to safely transport the products needed for first aid assistance in remote or hard-to-reach places.
- This backpack is designed to be used as self-protection in brigades; that is to say, a designated person can provide primary assistance to his colleagues in field emergencies, since this backpack has everything needed for airway management, bleeding, and trauma.

DESIGN AND MATERIALS

- The backpack is highly comfortable and keeps the content safe thanks to shock absorption and thermal insulation. Its internal compartments are designed to carry every element needed either for airway management, circulatory system control, immobilization, biosafety, medication, etc. It allows quick identification and access to the elements and prevents them from falling off when the backpack is opened.
