

Pediatric immobilizer

USES

- It simplifies full body immobilization of pediatric patients. It combines a spine board, a spider harness, and lateral head immobilizers in a single product. All these together as a unit facilitate transportation and ensure safety to the patient.

DESIGN AND MATERIALS

- Ergonomically designed and adapted for pediatric patients, this immobilizer is an integral system that has a coated polyester exterior which can be removed for cleaning, 5 handles to facilitate transportation, 4 fastening belts to immobilize the patient, and 2 lateral immobilizers for the head (included), removable, with polyurethane stuffing.

Patients must be applied the cervical collar before being positioned in this immobilizer, as the function of the collar is irreplaceable and essential.
