

Hose washer

Designed to clean hose lines simply, efficiently, and effectively before leaving the work area. The hose washer uses water supplied by a pump through a standard 1.5" connection, powered by a standard interchangeable 28 V Milwaukee or Genesis type battery, and requires no special accessories.

USE

- It has two long bristle brushes driven by an independent motor. The long bristles and the fixed spacing of the brushes ensure constant pressure on the hose surfaces and, therefore, an optimum cleaning result.
- Once the hose is loaded into the wash channel, the bristles catch the coupling and the brushes automatically pull the hose through the machine. Therefore, only one person is needed to operate the machine comfortably and effectively.
- The stainless steel frame makes it easy to store the washer and handle it from any direction.

ACCESSORIES

- Unit with rubber wheels and a retractable luggage-style handle
- Stainless steel tube structure for easy storage, transport, and handling
- Retractable handle
- 2 rotating brushes for intensive cleaning
- Washing channel for hoses with couplings of up to 25 m
- Extensible stabilizers
- 4 spray nozzles for cleaning and rinsing

MATERIALS

The exterior is made of a compact aluminum housing, covered with double-sided diamond plates.

TECHNICAL SPECIFICATIONS

Dimensions	59 cm x 55 cm x 33 cm
Weight	30 kg
