

PERSONAL PROTECTION - **FIRE RETARDANT CLOTHING**

Wildland mask

Designed to cover commercial masks, whether disposable masks or nose and mouth half masks. Its main purpose is to hold the air filtering element and add greater resistance to temperature. It is soft in contact with the skin.

DESIGN

- | The design of the wildland mask allows it to be adapted to each user for greater comfort. In the nose section it can be adjusted to fit the septum, and it has elasticized sections to improve the fit around the perimeter of the face and the head.
- | It is fastened and adjusted by means of a buckle, which allows the wildland mask to be put on and taken off without having to remove other personal protection elements.
- | It also has a strap with a buckle to keep it hanging around the neck when it is not used.

MATERIALS

- | Outer side: Ripstop flat fabric, 98% aramid and 2% carbon fiber
- | Inner side: Knitted fabric, 50% aramid and 50% FR lenzing
- | Buckles: FR nylon
- | Yarns: 100% aramid
