

PERSONAL PROTECTION - **FIRE RETARDANT CLOTHING**

Fireproof Collective Shelter

Comprehensive Safety and Self-protection Device specially designed to help establish safety and protect people and property in entrapment situations. The Fire Survival aims to create opportunities, in extreme situations, where the lives of firefighting personnel may be in danger.

DESIGN

- | Cover built with fireproof materials that can be easily deployed by means of an air cylinder and with quick-connection systems that can be used both for personnel breathing and for inflating the shelter..
- | It has convection and radiation heat protection for high power flames at a close range.
- | Capacity and weight: FS2.4: for 4 people (Weight: 12 kg); FS2.6: for 6 people (Weight: 15 kg).

TECHNICAL SPECIFICATIONS

Pneumatic structural system:

- | Rubber hose protected with flame-retardant fabric
- | Inflation valve
- | Safety valve
- | Inflation time: 10 seconds

MATERIALS

- | Multi-layer aluminized fiberglass fireproof fabric.
- | 1st and 2nd outer layers: With special protection against radiant heat.
- | 3rd and 4th inner layers: With special thermal protection.

Breathable air distribution system:

- | Quick-connect system
- | Air distributor and flow regulation
- | Distribution duct
- | Individual air mask
- | Mask carrying bag

Fireproof screen for external display:

- | Polycarbonate with gold foil, approval 4-4 according to EN171, with thermal resistance of up to 1290 °C.
