

Light water backpack

It is a water backpack designed for fighting wildfires.

DESIGN

- | It is a highly-resistant PVC bag with a breakwater tensor inside.
- | It has a top filling mouth and a bronze quick-connection 360°-turn valve at the outlet, so the hose can be attached or removed from the bag when it is full of water without losing its content.

TECHNICAL SPECIFICATIONS

Capacity	20 L
Dimensions	610 mm x 500 mm
Dry weight	2 kg
Aprox. range	Jet: 12 m - Mist: 3 m
Max. discharge volume	125 cm
Nozzle	Double action

Light water backpack

DETAILS

Easy-filling backpack

DOUBLE-ACTION NOZZLE

The low-maintenance nozzle has been redesigned to reduce weight and improve aesthetics and ergonomics, adding a movable handle on the main spout for an easier grip.

The spout has also been redesigned, achieving a substantial improvement of the full water jet and the mist produced.

The materials used now in its manufacture are corrosion resistant and prevent the build-up of calcareous materials. The nozzle is still a double-action one, and the user can choose between a 12-meter-range full jet and a 3-meter-range mist.

The easily-adjustable padded harness for weight distribution, together with the fastening straps for communication equipment, and the snap hooks for hanging the nozzle work in combination to ensure free movement of the hands and unrestricted movement for climbing, jumping, and walking in any kind of topography.

HOSE

The composition of the anti-kink hose (it does not break or collapse) has also been improved and has changed to internal stainless steel spigots for the use of foam and flame-retardant agents.
