## Mapache extinguishing Backpack

### DESIGN:

Our water backpack stands out in the market for its square design that maintains its shape both during and after filling. Designed to provide comfort during long workdays and extended walks, this new version includes various adjustments that allow optimal weight distribution and adapt to the needs of all users.

The outer shell, which serves as the structural container, is made of nylon fabric with a PU coating, increasing resistance to wear and abrasion, reducing weight, and adding a key flame-retardant feature that meets NFPA 701 standards.

### POCKETS

- The front pocket includes a zipper and fastenings that attach it to the backpack, providing versatility for carrying various tools or items. Its design allows the pocket to detach from the main body of the backpack, and it features an adjustable system at the top for better safety and comfort.
- Inside, it contains a water bag with an internal baffle for better stability, made of highly resistant PVC that can be easily replaced without tools in case of punctures. It has a top filling opening with a filter and handles to maintain a horizontal position while filling.
- On the front, it includes a MOLLE system for adding accessories or tools and two side pockets for carrying torches or water bottles.

### 3 ADJUSTABLE RETENTION SYSTEMS:

- Padded waist, chest, and shoulder straps
- Stainless steel double-action nozzle
- Bronze quick coupling
