WILDFIRE

Aluminum Fire Swatter with Rigid Handle

Tool designed to extinguish fire by suffocation (displacement of air), consisting of a metal handle or shaft with a self-extinguishing rubber blade or flapper. The handle and the flapper have a perfect fit. The flapper adheres perfectly to the handle through a process of vulcanization, making this fire swatter a single non-detachable and comfortable set.

TECHNICAL SPECIFICATIONS:

Handle:

- | Duralumin tube
- | Corrosion resistant
- | Smooth finish
- | External diameter: 25 mm
- | Internal diameter: 21 mm
- | Exceptionally resistant to breakage
- | Shape recovery after bending

Flapper:

- | It is made of 6 mm thick self-extinguishing synthetic rubber.
- | The entire flapper is reinforced with a fabric mesh for extra tear resistance. Critical areas have double reinforcement.
- | One of the faces is grooved to extend service life.
- | Increased rigidity.
- | Thicker outer edges.
- | Steel reinforcement on the inside.

Grip:

- | Ergonomic rubber grip for more comfortable handling.
