

Floating Pump Kit

— The kit, consisting of a floating pump and discharge hose, with an optional water tank, allows deploying the pump over a water source (pool, tank, or river) for direct fire suppression.

— The pump provides high pressure, exceeding 13 bar, and is easy to operate as it is self-priming and draws water directly from its bottom without the need for large hoses. It has sufficient pressure to operate with hose lengths exceeding 200 meters.

— Self-supporting water tanks: capacities of 1,000 / 5,000 / 10,000 liters.

COMPONENTES:

— FT-200-4B Pump: High-pressure floating pump with a 2- or 4-stroke engine.

— Performance: Maximum pressure: 13 bar / Maximum flow rate: 300 liters per minute.

— 50 meters of hose.

— Flow-adjustable nozzle.
