

Wildland Fire Shovel with Fiberglass Handle

QR: Use your camera or bar code scanner and download the digital PDF version

USES:

- Opening and widening firelines. Digging and removing vegetation.
- Eliminating combustible material and helpful for interrupting fire spread.

DESIGN & MATERIALS

BLADE

- Forged steel, heart-shaped with self-sharpening edges.
- Baked enamel finish for high protection against wear and heat.
- Integrated step so the user can apply pressure with the foot without damaging boot soles.

FIBERGLASS HANDLE

- The fiberglass handle replaces the traditional wooden handle, improving impact resistance, reducing weight, and increasing durability.

- Ergonomic design.
- Hollow tubular, straight handle, made of fiberglass reinforced with resin and extruded with HDPE (high-density polyethylene).
- Anti-slip grip zones.
- Dielectric insulation up to 50,000 volts.

CERTIFICATIONS

- It meets U.S. Forest Service regulations, with specific requirements for angle of attack, curvature, and dimensions to optimize performance.

WEIGHT	2,3 Kg
LENGTH	1,3 m
HANDLE	Fiberglass
