DC 057_2025

DECLARATION OF CONFORMITY

DC 057_2025

Subject: Fiberglass Handles for Wildland Tools, according to di-electric resistance test and heat exposure.

Scope: Testing fiberglass handles to di-electric resistance and isolation, and heating exposure.

Manufacturer's Name: **INFOREST SRL**

Manufacturer's Address: **Brasil 1238, Alta Gracia (X5186), Córdoba, Argentina**

Product Name Model / SKU:

- **FIBERGLASS HANDLE – 1,20 / 1,50 / 1,80 / 1,95 / 2,7 Meters for wildland tool / SKU 02PIFRZP0003**

Technical information: Multi-tool handle: Hollow, straight tubular handle made of resin-reinforced fiberglass and over extruded with HDPE (high density polyethylene), with anti-slip areas that improve grip and reduce vibration transmitted to the user.

- **FIBERGLASS HANDLE – 850 mm for Wildland Axes / SKU 02PIFRZP0004**

Technical information: Pulaski handle: 36" fiberglass handle, coated with yellow HDPE (high density polyethylene) plastic and black rubber grip, with anti-slip zones that improve grip and reduce vibration transmitted to the user.

Length 850 mm (+- 10 mm).

Test Reports / Reference standards:

- 3 0 5 3 6 - 2 4 (21/11/2024) – Procedure IEC 62193 / Item 6.4.2. (isolated poles)
- 3 0 5 3 5 - 2 4 (21/11/2024) – Procedure IEC 62193 / Item 6.4.2. (isolated poles)

Results:

- Resistance to the application of continuous voltage of up to 50,000 volts applied on the element, verifying the non-existence of contouring, arcing, sparking, perforation or erosion on the surface.

We INFOREST IBÉRICA SL, hereby certify and declare that our fiberglass handles that are parts of our wildland tool range and axes, are di-electric resistant up to 50.000 volts.

The referred handles, made of HDPE (*high density polyethylene*) can also resist an exposure up to **130°C** (266°F). Its melting point starts at **137°C** (279°F) and its combustion points starts at **349°C** (660°F).
