

## Zonda 2T Blower

High-velocity portable compressed air system

### USES

- Clearing and cleaning grounds by expelling high-velocity air.
- Removal of leaves, branches, debris, and waste in open spaces.
- Emergency and firefighting operations: cleanup of fire-affected areas.
- Removing obstacles that hinder access and rescue operations.
- Clearing materials without direct contact with hazardous substances.

### DESIGN AND MATERIALS

- Air-cooled single-cylinder 2-stroke engine, integrated into a compact housing that promotes heat dissipation and protection of internal components.
- Backpack-style unit with ergonomic design, featuring a structural frame and harness with adjustable straps and a rear cushion pad for even load distribution and greater comfort during extended operation.
- Air delivery system consisting of a rigid tube with a flexible section that improves maneuverability and reduces vibration transmission.
- The system integrates a single-cylinder two-stroke engine, flexible connecting tube, blower tube, and interchangeable nozzle.
- All connections are quick-fit bayonet-type for easy assembly and disassembly.
- Includes an integrated fuel tank, primer bulb ignition system, and easily accessible throttle and ignition controls.
- Integrated handle on the tube with built-in throttle control.
- Unit built with high wear-resistance components, including a high-durability plastic fuel tank, metal clamp joints, and corrosion-resistant parts.

## TECHNICAL SPECIFICATIONS

<b>Output airflow</b>	1,850 m <sup>3</sup> /h
<b>Air velocity</b>	115 m/s
<b>Rated speed</b>	7,500 RPM
<b>Displacement</b>	81.6 cc
<b>Rated power</b>	3.5 kW
<b>Tank capacity</b>	2.3 L
<b>Engine type</b>	2-stroke single-cylinder
<b>Recommended fuel</b>	90# gasoline + 2T oil (25:1)
